

Mobile Development

Native and cross-platform mobile development is one of our key specialties. Agile approach combined with our skills and effective project management enables our mobile team to make sophisticated yet user-friendly mobile applications.

We help our customers choose most effective implementation methods tailored to their specific business needs by selecting native or cross-platform technologies. Our portfolio contains projects realized with the use of native systems and Xamarin framework. We've thoroughly analyzed all the advantages and disadvantages of both methods and now we're ready to share our unique expertise with our partners.

Strong experience in cross platform development has helped our company provide our clients and partners with high quality solutions that minimizes their cost and maximizes their reach. A single code that runs across multiple mobile operating systems that is what cross platform mobile app development is all about!

Being an **Authorized Xamarin Consulting Partner**, InToSoft is ready to share its knowledge and experience with its clients and ensure top-level development of cross-platform applications.

Why you should this technology?

- Xamarin covers multiple platforms which means that your solutions can attract more people's attention;
- Such products are much easier to implement and to support;

- Look and feel of the application on different platforms remains identical;
- Development cost significantly cuts (up to 30% cost reduction can be expected).

We'd be also glad to help you with:

- Native apps development
- Application support
- Integration with enterprise systems

Our development process supposes that we show results quickly, making sure you participate in every step of the way. Our methods and specialists will handle complexity of project within your budget and project deadlines ensuring both rapid and cost-effective delivery.
