

Enterprise data security

InToSoft team of dedicated professional is ready to help you with creation of your own risk-balanced enterprise data solution that would ensure leading data protection to safeguard your organization's critical data.

In modern online and mobile world security is an extremely important issue that prompts various institution and enterprises to strive to protect their corporate data against leakages and unauthorized access. InToSoft team has successfully delivered some security development projects aimed to maintain data protection in digital environments.

Thinking how to properly secure your sensible corporate data? We can enable secure role-based access to intellectual property and financial information, avoid breaches and protect your data at all stages of its lifecycle, no matter if it is being used, transmitted or stored.
