

InToContacts

InToContacts provides company employees with the actual contact list of their colleagues. Check out how it works!

The solution has the following functionality:

- Contacts of your colleagues are always at hand.
- The contact list is updated each time the app is launched.
- Calling and messaging can be done directly via the App.
- Company contacts are synchronized with the phone book of your smartphone*.

InToContacts is available in two versions, standard and configurable. The latter can synchronize the contacts with your smartphone's phone book.

We will be glad to customize the application for your company, add your corporate logo, fonts and make the app that matches your corporate design.

The app can interact with your corporate account administration system:

- Microsoft Active Directory (out-of-box solution).
- Open LDAP (Lightweight Directory Access Protocol).
- Lotus.

We are ready to adapt InToContacts to your infrastructure.
